JETTY & HARBOUR

Our name is new, but
Mainstay Marine Solutions carries on a
long legacy of boat building with a core
management team who have been designing
and building workboats for over 30 years.

We understand that time and precision are critical.

Whether it's new workboat build, refit,
maintenance or repair, jetty or harbour
infrastructure works, or
marine energy device fabrication.

Responsive and exacting, we meet your critical
deadlines and ensure your vessel or waterside
infrastructure's time in service is maximised, safely.

TIME IS CRITICAL

We are known for our craftsmanship. We ensure vessel or infrastructure downtime is minimised, with precise attention to detail and workmanship, to maximise safe time in service.

YOUR REPUTATION

Your reputation is important to us and we understand that a vessel out of the water, or a waterside infrastructure out of use, for an extended amount of time has a significant impact.

RESPONSIVE

We are characterised by our can do attitude. Our highly personal approach and skilled employed workforce mean we are available to respond when needed.

LIFETIME VALUE

Mainstay Marine Solutions always consider the long term cost of ownership and overall business objectives required of a vessel. This is a key consideration from specification, design and build through to ongoing maintenance.

“ AT MAINSTAY MARINE SOLUTIONS WE FOCUS ON YOUR OVERALL **BUSINESS REQUIREMENTS** TO ENSURE YOU GET THE SOLUTION YOU NEED. ”

CAPABILITIES

WORKBOAT BUILD & MAINTENANCE

We build, maintain and repair precision engineered workboats, including a full design facility with our own proprietary designs and those used under agreement.

Mainstay Marine Solutions has continuously developed and enhanced its design, marine engineering, systems, fabrication and welding capabilities over more than three decades.

Our capabilities are showcased in the pilot boats, patrol boats, wind farm support vessels, workboats and passenger vessels recently launched and in build.

With our specific marine engineering expertise, optimum location for marine based projects and extensive experience in this emerging and fast growing sector, Mainstay Marine Solutions is a partner of choice for marine energy device and support vessel fabrication projects.

We have extensive experience in marine energy vessel design and build, including tidal energy device and wind farm support vessel planning and fabrication.

With a highly skilled, employed engineering workforce, Mainstay Marine Solutions has been offering waterside infrastructure build, maintenance and repair services for a long period.

We offer preventative and repair services to port and harbourside facilities, as well as the extensive jetty infrastructure servicing the oil refinery industry in West Wales.

Our knowledge of our clients' facilities, experienced workforce and highly responsive leadtimes ensure waterside facilities are available, and most importantly safe, when needed.

SAFETY

At Mainstay Marine Solutions, safety is extremely important to us. We have a very strong safety culture and place it at the centre of our operational performance and procedures. Our goal is to achieve an incident free workplace and we are driven by continuous improvement.

PROCESS

We have rigorous processes characterised by a solutions focused approach and meticulous attention to detail. An integral part of our approach is to engage with all vessel stakeholders to ensure the final solution meets all of our clients' business and operational requirements.

FACILITIES

Our comprehensive new-build and maintenance facilities benefit from an ideal location in the deep water port at Pembroke Dock. Our full range of capabilities are available onsite, including our highly skilled employed workforce.

We are well equipped to simultaneously manage multiple new build and maintenance contracts at any one time. Key facilities combine to offer 4000m² of covered workshops, and include four new-build halls, four slipways - two of which are covered, a fifth 'roll-on roll-off' slipway and wet basin.
